

Working Group 1

Group 1

FluMart Issues

- No issues with accessing FluMart, uploading data
- Individual country data entry and “variable” uploading issues (one country reported each)
- No-one has used the “browsing data” function
- Issues related to error messages are easily resolved and email Bikhram for support is working

Surveillance Dashboard

- Indicator framework should be developed mapped to surveillance pilot objectives
- Potential groups of indicators by sentinel site
 - Epidemiologic indicators (time trends, age groups, risk groups, signs and symptoms)
 - Surveillance process indicators (how many with sample collected, how many with missing data)
 - Indicators to answer questions about optimal case definitions

Surveillance Dashboard

- General comments:
 - Need for monthly feedback to countries about data quality (e.g. missing data, use of “other” category for co-morbid conditions) including cumulative data analyses for backfilled data
 - Need to revise categories of variables (e.g. comorbid conditions does not include a neuro co-morbid category)
 - Too few data to to label figures as showing seasonality

Surveillance Dashboard

- General comments:
 - WHO should be in charge of the data display for the indicators
 - Add data descriptors in this iteration of the dashboard

Publishing

- All countries agreed to no open access publishing of data
- All countries agreed to “pilot countries only” raw data and data output accessibility
